

# Merco Touch-Free Holding Solutions for the general market:

## Merco Holding Cabinet with Tray Tracking Technology

Merco brand has the only timing system in the market that requires **NO** touching by operators!

During these unprecedented times, it is especially important to assure your customers that their food has been prepared in the safest manner possible. With an increase in take-out and delivery orders, batch cooking is also more prevalent. Merco hot holding cabinets can help you get through your busiest times by holding your batch-cooked food items safely and at the high quality you demand for your customers.

- During normal operation, once the unit is turned on, no-touch controls make it easy to maintain safe and quality holding conditions for your food items. Pre-programmed menu items maintain temperatures and hold times for each individual food item.
- Timers automatically start when trays of food items are inserted into the cabinet.
- Timers automatically move with the food items if tray is transferred to a different location (BoH to FoH, or Cabinet to Cabinet).
- Timers can be cancelled touch-free when expired or empty!

Standard holding cabinet features also included:

- Wi-Fi capable
- Single and dual sided access and/or displays
- Multiple temperature zones for customized holding options
- Tray seals provide an easy change from crispy to juicy holding environments
- Stainless steel exterior and tray seals
- Hard anodized heating surfaces to enhance performance and increase durability
- Able to display multiple languages
- UL and cUL listed
- 120V (15-30 amp, depending on equipment size)
- 1 year warranty on parts & labor
